

DIVY BAROT

Full Stack AI Engineer

workwithdivy@gmail.com | +91 97251 35804 | www.linkedin.com/in/divy-barot/ | github.com/divydoesnotcode

PROFESSIONAL SUMMARY

Full Stack AI Engineer experienced in delivering production-ready Generative AI applications, LLM automation pipelines, REST APIs, and AI-powered platforms. Comfortable working async and owning delivery end-to-end: as a freelancer since 2023 I've managed client communication and priorities, shipping work independently without in-person oversight. Hands-on with Python, JavaScript, React, Next.js, Node.js, Ruby, Rails, Docker, Git, and LLM integrations (Groq, Mistral, Ollama, Qwen, Minstral). Actively deepening automated testing practice (RSpec/Jest). Share build-in-public updates on LinkedIn.

PROFESSIONAL EXPERIENCE

Full Stack AI Engineer — ProcurementGenie Pvt. Ltd., Jan 2026 - Present

- Promoted from Intern to Full Stack Engineer after 3 months, expanding ownership across frontend, backend, REST APIs, AI integration, and end-to-end feature delivery.
- Built and shipped an AI-powered procurement negotiation feature integrating local and cloud LLMs (Ollama, Groq, Qwen, Minstral), reducing manual turnaround time by over 60%.
- Developed AI-assisted Purchase Requisition review using LLM-based analysis to identify anomalies and summarize requisitions, reducing manual review time by over 50%.
- Designed REST APIs across Node.js and Next.js services to connect frontend workflows, backend logic, and multiple LLM providers, keeping provider logic decoupled from feature code so providers can be swapped without touching calling code.
- Built backend services and API integrations for procurement automation, coordinating internal systems with multiple LLM providers, with local model integrations through Ollama supporting cost-conscious, reliable AI workflows.

Freelance Full Stack Engineer — Independent, 2023 - Present

- Delivered full-stack software and automation projects for 2 clients entirely remotely and asynchronously — covering AI automation workflows, custom frontend applications, deployment, and API integrations with no fixed working hours.
- Designed and deployed "Vermithor," a self-hosted AI Telegram assistant using n8n, Groq, and Docker, integrating Google Calendar, weather data, and prompt-engineered LLM outputs into a daily briefing workflow.
- Built and delivered a client portfolio website with Next.js, implementing responsive UI and deployment while working directly against client requirements over async channels.
- Managed project execution independently — setting priorities and communicating progress proactively without daily check-ins.

SELECTED PROJECTS

ProcureGenie — Local-LLM Vendor Discovery System, FastAPI, React, Ollama, PostgreSQL

- Built a FastAPI + PostgreSQL backend implementing a "Database-First, LLM-Fallback" architecture: queries hit the database first, and a local Ollama LLM only generates vendor data via Tavily Search when no match exists, with results validated via Pydantic v2 and persisted for reuse.
- Built the React (Vite) frontend with Tailwind and Framer Motion, including a dual-mode search toggle between database lookups and live AI generation.

DJ Rohan — Client Portfolio Site, Next.js, TypeScript

- Built and shipped a client portfolio website using Next.js and TypeScript, translating direct client requirements into interactive animations, social integrations, and a responsive production deployment.

My Daily Briefing — Multi-Source Automation Bot, n8n, REST APIs

- Built a scheduled automation workflow orchestrating six parallel sources (weather, currency, Bitcoin price, word of the day, quotes, AI news) into a single Discord digest.
- Engineered per-source filtering and formatting across six live APIs, reducing 1,000+ incoming RSS items to the top 5 relevant stories per run.
- Deliberately built the data orchestration layer without an LLM first, then layered AI in afterward — a systems-first approach that kept the core pipeline decoupled from any single model provider.

TECHNICAL SKILLS

- Languages: Python, Java, Ruby, JavaScript, TypeScript
- Frontend: React, Next.js, responsive UI development
- Backend: Node.js, Ruby on Rails, REST API design, API integration, FastAPI
- AI/ML & GenAI: Generative AI, LLMs, prompt engineering, LLM chaining, Groq, Mistral API, Ollama, Qwen, Minstral, OpenWebUI
- Automation & APIs: n8n, Zapier, Webhooks, Google Calendar API, Telegram Bot API
- Databases & Tools: MySQL, MongoDB, SQLite3, ChromaDB, Pinecone, Git, GitHub, Docker, ngrok, Bitbucket

EDUCATION

B.E. in Computer Science and Engineering (AI/ML), Aug 2023 - May 2026

Gujarat Technological University, Ahmedabad | CGPA: 9.23/10 | Coursework: AI, ML, Deep Learning, Computer Vision, DevOps

Diploma in Computer Engineering, Jul 2020 - 2023

Gujarat Technological University, Ahmedabad | CGPA: 8.68/10 | Coursework: Java, Networking, OS, DSA, Web Application
